## PostFlight Suite Version 1.0

March 1, 2010 – Ecublens, Switzerland – senseFly LLC announced today the release of PostFlight Suite, a post-processing software for the swinglet CAM that allows to export flight logs to custom format and geo-tag images taken in flight.

“This software is the first step to close the gap between the flying camera and a mapping solution”, said Andrea Hildebrand, co-founder of senseFly LLC. “It will significantly increase the ease to interface our flying camera with current available mapping software.”

### Performance & Features

The PostFlight Suite Version 1.0 offers three features: (1) Geotag images, (2) KML flight track creation and (3) GPX flight track creation.

Compatible with Mac OS X 10.5/10.6 and Windows XP/Vista/7.

### Pricing & Availability

The PostFlight Suite 1.0 is now available to our current customers at no cost.

**Geotag aerial images**

**Create KML and GPX flight tracks**
